...because you shouldn't lay Lambottes
on top of one another in the tray

It's a mistake to lay your Lambottes on top of one another in the tray, either by themselves or in the bottom of your Ortho sets. The C-KURATOME® is your best solution to rack them!

POLYMER PAD
PROTECTS EDGES

STURDIER BARS

EASY PULL-UP POSITION FOR BARS

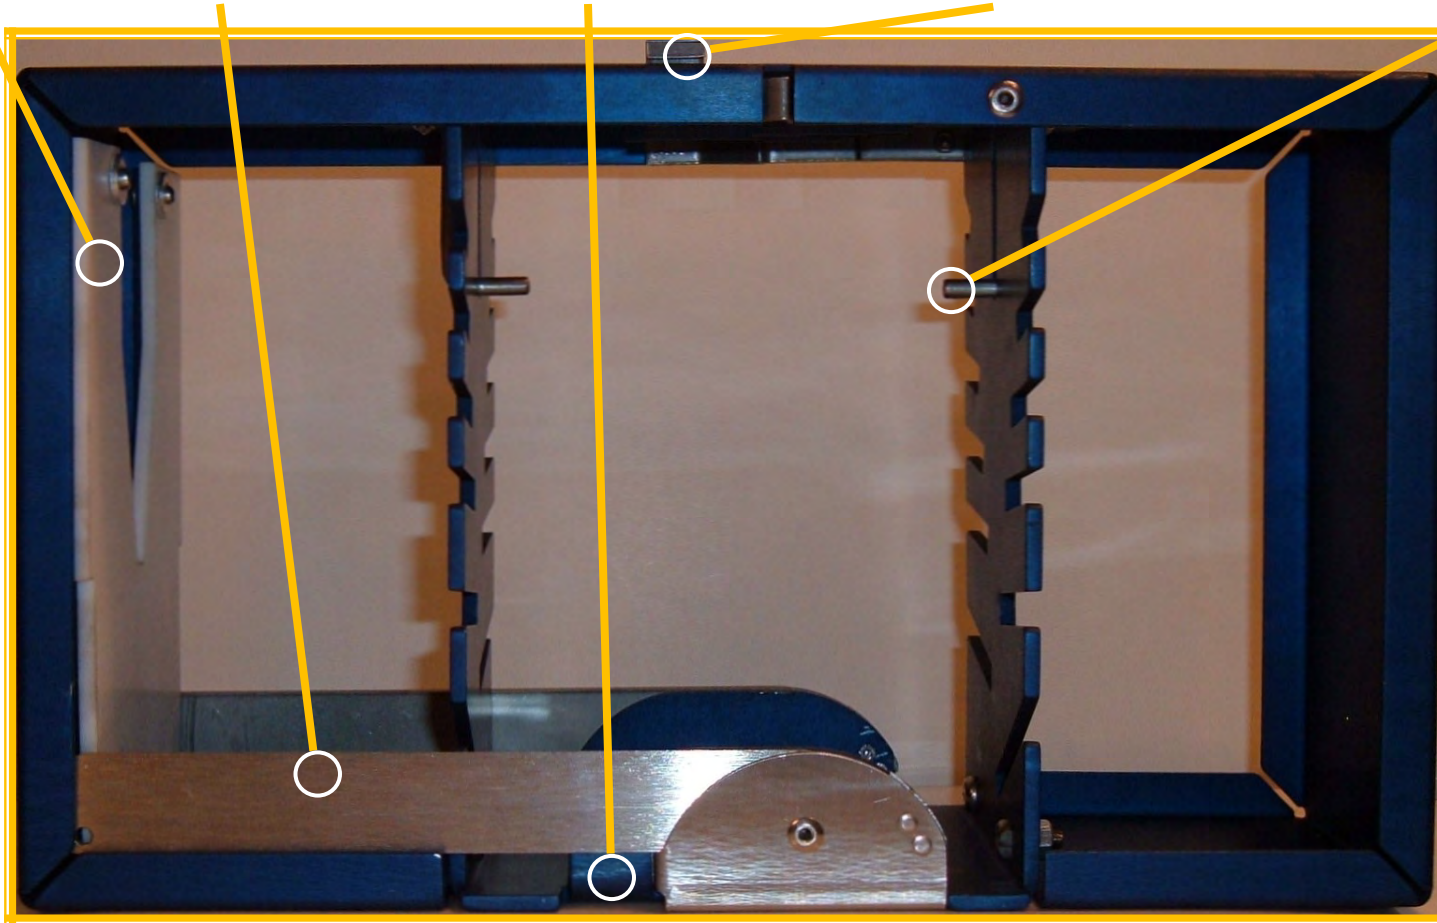

NO-SNAG LATCH RELEASE
BUTTONS EASE OPENING

DROP-DOWN HANDLE
FACILITATES WRAPPING

You should separate items (& especially flat ones) for the detergent in the washer-sterilizer to make full surface contact with all of the instruments...to say nothing of steam in the autoclave!

A full set of 12 Lambottes has a surface area of about **109 square inches** (not 28 to 30 square inches) to be cleaned & sterilized!

No more fuss about switching sides for use of straight and then curved and back again! All 12 Lambottes are safely accessible to tech.

The horizontal disposition of your Lambottes in the C-Kuratome® gives the rack a smaller footprint on the instrument table in the O.R. without danger of their tipping out and causing damage to instrument corners, to other equipment or to personnel.

Rack 'em, don't stack 'em!
